Anh Sang Nguyen

DevOps Engineer | AWS | Azure

Ho Chi Minh City, Vietnam

Summary

Hi, I am a DevOps Engineer with extensive experience in building AWS Cloud services and implementing infrastructure as code using AWS CloudFormation. In a previous project, I successfully utilized a range of AWS services, including ECS, VPC, S3, Application Load Balancer, Web Application Firewall (WAF), and CloudFront, to architect and optimize cloud-based solutions. I am adept at creating and maintaining large-scale CI/CD pipelines using AWS CodePipeline and Azure Pipelines, ensuring seamless deployment processes. Includes containerizing applications using Docker, integrating tools for code quality assurance and vulnerability scanning into pipelines, and developing fully automated CI/CD processes to enhance project deployment efficiency.
In addition, I also have extensive knowledge of NodeJS, PHP, Docker, Linux,... to assist in building and optimizing many different infrastructures.

If you are looking for a values-driven DevOps who can enhance your organization's operations, I am willing to contribute my skills and expertise.

As a side note, I am also a music lover, and playing the guitar isn't bad either. Also on the way to find people with the same passion. I can contribute part of my talent to the company's extracurricular activities.

Cheer!
